

Emixil Masternode Guide Cold Wallet

We recommend to use Ubuntu 16.04

1. Wallet setup

-Make sure you have 5000 EXL on your address and have 10 confirmations

-Save your private key (masternode genkey) and output (masternode outputs)

Go to **File** -> **Receiving Addresses...** -> **New** -> give simple name then **OK**

Right click on your label and copy your address.

Send 5000 EXL on your new address and wait to have 10 confirmations.

Go to **Tools** -> **Debug Console**

a, *masternode genkey* -> save the output

b, *masternode outputs* -> save the output (without quotes)

You can download latest wallet version here: <http://www.emixil.pw/#wallet>

2. VPS setup

```
sudo apt-get install wget -y
```

```
cd /root
```

```
wget https://github.com/emixil/emixil_sentinel/releases/download/v1.0.0/emixil_mn.sh
```

```
chmod u+x emixil_mn.sh
```

```
sudo ./emixil_mn.sh
```

It will take 10~ minutes and after the end you will see something like this:

```
rpcuser=emixiluser
```

```
rpcpassword=xyxyxyxyxyxyxyxy
```

Copy and paste it on your windows wallet configuration file

Tools -> **Open Wallet Configuration File** -> Paste and save

Tools -> **Open Masternode Configuration File**

```
<your_label_name> <vps_ip>:43434 <genkey_output> <tx_id> <tx_index>
```

Save

Go back to your windows wallet. Restart it and after that you able to START your masternode.
